A NEW SUBSTANCE FOR FILLING

IN LINES & WRINKLES

Radiance™ (Hydroxyapatite)

Radiance is a new injectable product for lip enlargement or for filling in smile lines, marionette lines or acne scars. The advantage of this product is the potential for a long lasting effect. Radiance consists of calcium hydroxylapatite suspended in gel. Because calcium hydroxylapatite is a normal constituent of bone, it should not elicit chronic inflammatory or immune response. Additionally, the gel carrier doesn't require allergy testing (such as collagen). Because it is in a gel, it is soft, smooth and pliable.

This material has been used in humans for a long time in dental, facial and orthopedic surgery. It has been used for vocal cords and in the bladder. The longest use has been in Italy where there have been no side effects.

- ◆ Radiance lasts for about 6months - 1 year
- ◆ It contains no animal products
- ◆ It is injected with a small needle
- ◆ It may or may not require local anesthesia depending on the site
- ◆ It is often more natural appearing and feeling than collagen
- ◆ It can be used for the lips/smile lines/marionette lines/furrows/acne scars
- ◆ It is FDA approved for other uses, but is pending FDA approval for facial aesthetic use (similar to Botox)
